

ABSTRACT

The present invention relates to a system and method for providing security to Internet hosting sites and mitigating electronic attacks against such sites. The system and method of the present invention provide: adequate Internet connections to the site to prevent connection floodings from intruders; implementation of different types of  
5 firewalls and an intrusion detection system to monitor and guard the site from electronic attacks; routing protocols to limit access to Internet hosting sites; continuous transfer of a hosting site from one geographic location to another in the event of an electronic attack against the hosting site or a disaster situation.
